WHAT IS LIQUIDITY

"the availability of liquid assets to a market or company"

01 MM buys assets

Market Makers hear of new coins and approach the creators directly for an allocation. MM gets a lot of coins either very cheap or free.

02 MM lends assets

Market Maker approached the exchange and offers to provide these coins for retail trading to profit on the spread.

03 Exchange offers assets

Exchange lists the coin publicly for retail to be able to buy and sell. By this time, MM is already well in profit

04 Retail buys assets

Retail starts to buy up what they think is an "early investment" but MM is offloading these coins onto retail and collecting profit.
