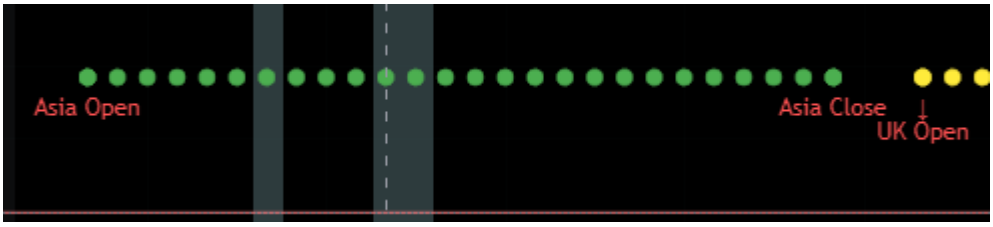
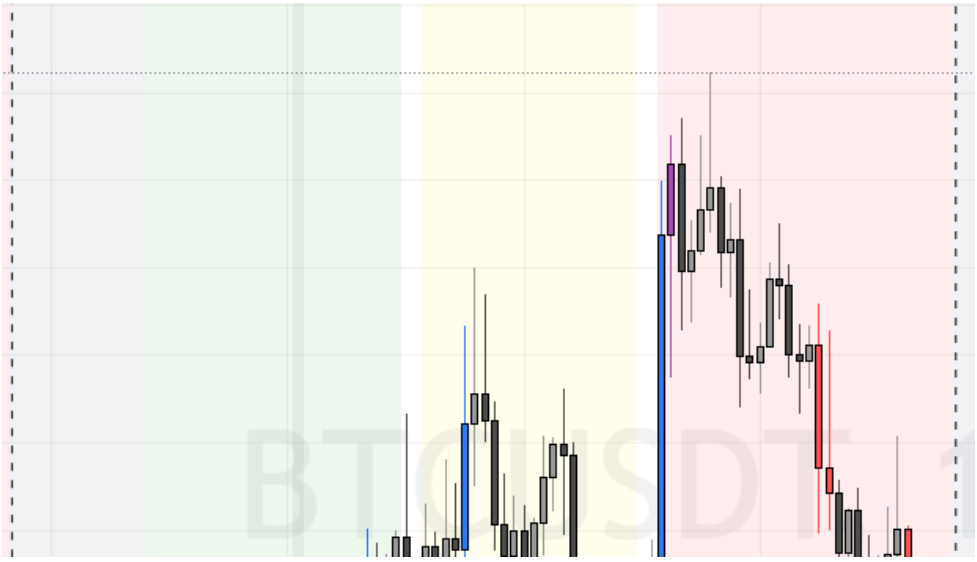
Market Session Times by Trade Travel Chill

This indicator includes:

- Session times (Top and bottom of page with symbols marking the duration of the session)



- Session times (Shaded background)

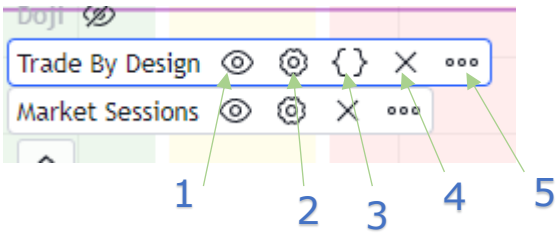


- Moon phases

Indicator Settings

When you hover your mouse over the indicator name on your chart it will expand to show five new icons. These are:

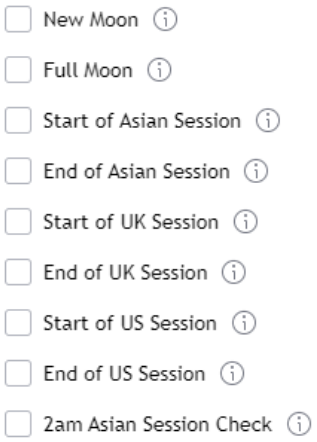
- Show/Hide (1)
- Settings (2)
- Source Code (3) - optional
- Remove (4)
- More options (5)



When you click on the "Settings" cog you will have access to all the settings related to that indicator. Some of these remove some aspects of the indicator others effect the way it works. The settings we will be working with are in the "Inputs" tab. Unless expressly specified this is where the settings will be located.

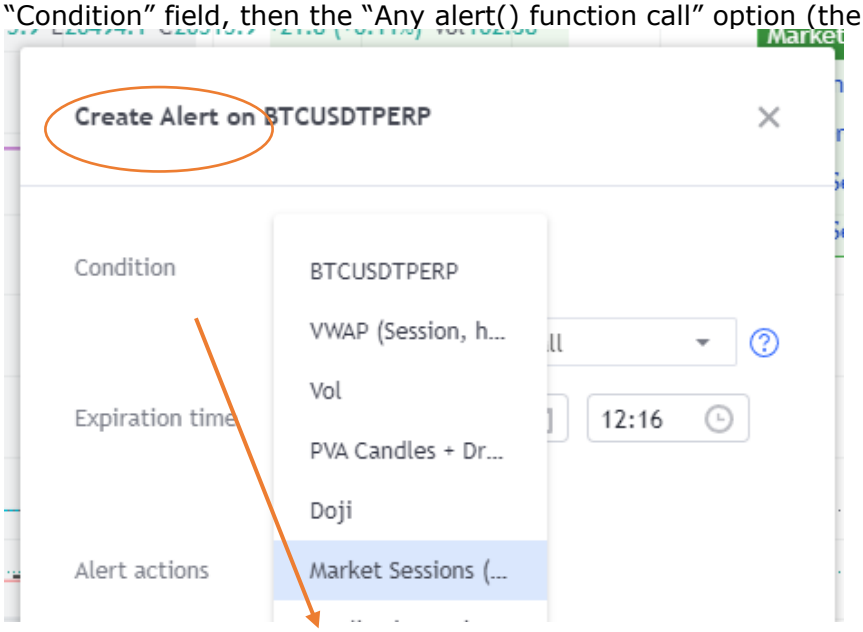
Market Session Times

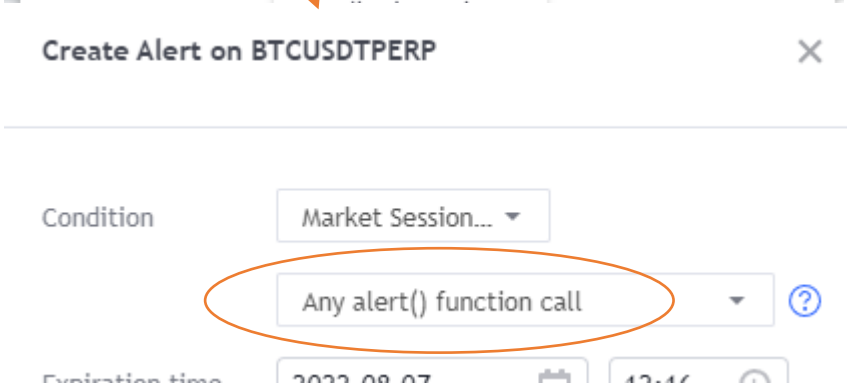
Allowed Alerts



Unlike other alerts where you must define the conditions, this alert type has the conditions pre-defined by the indicator. To enable this functionality, do the following:

To create a script alert on an indicator, select the script in the "Create Alert" dialog box's "Condition" field, then the "Any alert() function call" option (the first item in the list).





The one thing that this type of alert has in common with the traditional alert is that it will be evaluated on the trading pair your select (for instance Bitcoin, USDT) and the Time Frame selected.

The impact of this can be illustrated by the following example:

You select BTCUSDT as your pair, 1 hour as the time frame. You select "Start of Asian Session" from the indicator settings screen. You wait but never receive any alerts. The problem here is that on the 1-hour time frame, the alert conditions are checked every hour and 20:30 (NY Time) is halfway between those checks.

In order for an alert to be generated you need to select a time frame that will intersect the time of the condition. In the scenario above you could use any time frame of 30m or less that will create a bar at that time (20:30). That leaves us with 1m, 2m, 3m, 5m, 10m, 15m and 30m. All of these will have a bar that opens at the 30-minute mark and therefore will be able to evaluate a condition at 20:30 each day.

New Moon: When this option is selected and the above procedure for adding indicator alerts have been followed this option will send an alert in the manner you selected to inform you that a "New Moon" event has occurred. The "Show Moon Cycles" option does not have

to be selected for this alert to be triggered.

Default: Unticked

Full Moon: When this option is selected and the above procedure for adding indicator alerts have been followed this option will send an alert in the manner you selected to inform you that a “Full Moon” event has occurred. The “Show Moon Cycles” option does not have to be selected for this alert to be triggered.

Default: Unticked

Start of Asian Session: When this option is selected and the above procedure for adding indicator alerts have been followed this option will send an alert in the manner you selected to inform you that the Asian Session has started. You do not need either the "Show MM Session Time (Full Background Colour)" or "Show MM Session Times (Symbols at top or bottom of screen)" options selected for this alert to be triggered.

Default: Unticked

End of Asian Session: When this option is selected and the above procedure for adding indicator alerts have been followed this option will send an alert in the manner you selected to inform you that the Asian Session has ended. You do not need either the "Show MM Session Time (Full Background Colour)" or "Show MM Session Times (Symbols at top or bottom of screen)" options selected for this alert to be triggered.

Default: Unticked

Start of UK Session: When this option is selected and the above procedure for adding indicator alerts have been followed this option will send an alert in the manner you selected to inform you that the UK Session has started. You do not need either the "Show MM Session Time (Full Background Colour)" or "Show MM Session Times (Symbols at top or bottom of screen)" options selected for this alert to be triggered.

Default: Unticked

End of UK Session: When this option is selected and the above procedure for adding indicator alerts have been followed this option will send an alert in the manner you selected to inform you that the UK Session has ended. You do not need either the "Show MM Session Time (Full Background Colour)" or "Show MM Session Times (Symbols at top or bottom of screen)" options selected for this alert to be triggered.

Default: Unticked

Start of US Session: When this option is selected and the above procedure for adding indicator alerts have been followed this option will send an alert in the manner you selected to inform you that the US Session has started. You do not need either the "Show MM Session Time (Full Background Colour)" or "Show MM Session Times (Symbols at top or bottom of screen)" options selected for this alert to be triggered.

Default: Unticked

End of US Session: When this option is selected and the above procedure for adding indicator alerts have been followed this option will send an alert in the manner you selected

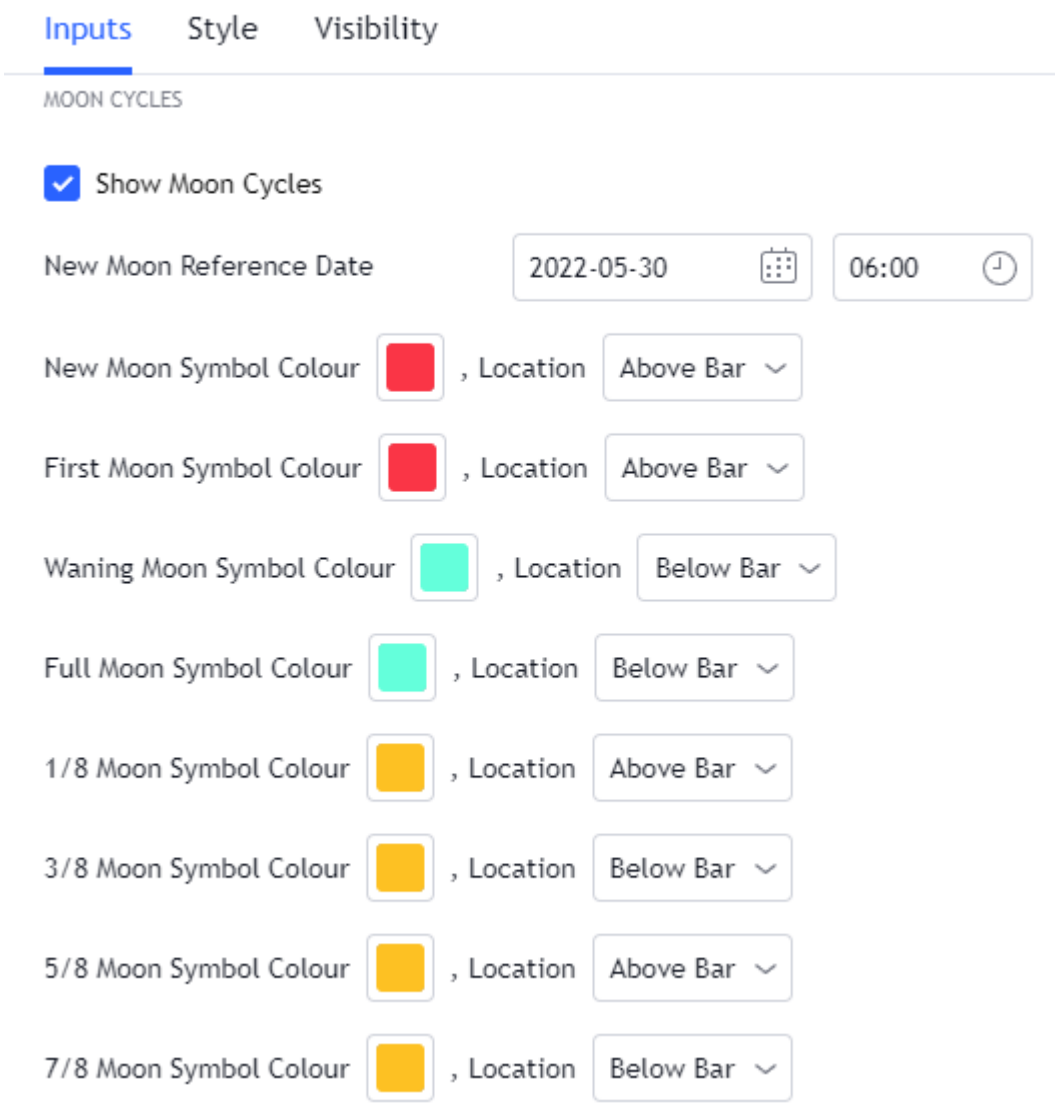
to inform you that the US Session has ended. You do not need either the "Show MM Session Time (Full Background Colour)" or "Show MM Session Times (Symbols at top or bottom of screen)" options selected for this alert to be triggered.

Default: Unticked

2am Asian Session Check: When this option is selected and the above procedure for adding indicator alerts have been followed this option will send an alert in the manner you selected to inform you to do a 2am Asian Session check. You do not need either the "Show MM Session Time (Full Background Colour)" or "Show MM Session Times (Symbols at top or bottom of screen)" options selected for this alert to be triggered. This is an important time as it often leads to the left side of the M or W. We need to pay attention to this time.

Default: Unticked

Moon Cycles



Show Moon Cycles:_ If you are part of the financial astrology community, this is the option for you. When this item is ticked it will show the cycles of the moon on your chart. If you untick it the moon cycles will not be shown.

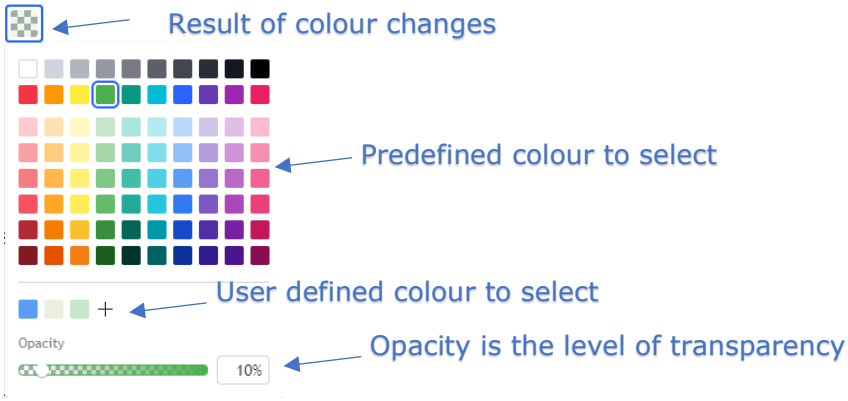
Default: Unticked

New Moon Reference Date:_ TradingView has no knowledge of moon cycles. In order for us to calculate the cycles we need an exact reference to calculate previous and future cycles. You can use a website such as timeanddate.com to get the lunar timetable for your city/country.

Default: 2022-05-30:21:30

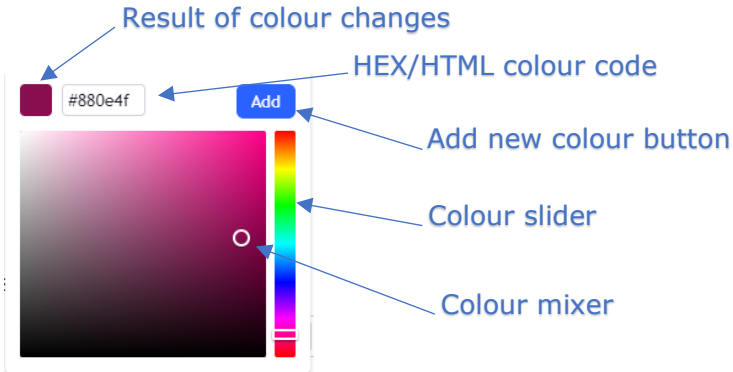
New Moon Symbol Colour:_ This option is used to change the colour of the New Moon Symbol.

Clicking the coloured rectangle will bring up a colour wheel. The colour wheel has multiple properties.



At the top left is a rectangle that shows you the result of your colour selection. This is followed by 80 predefined colours you can select. This ranges from white in the top left to dark pink/pressed grape colour in the bottom right. The next section has a couple of coloured rectangles and a plus sign at the end. We will get back to this one. The last section is the Opacity. Opacity is just a fancy way of saying how transparent you want something to be. The more transparent the colour the lighter it will be. The slider is a percentage from 0 – 100%. 100% being no transparency and 0% being see-through.

The skipped section ending with the plus sign is where you can define your own custom colours. When you click on the plus sign, the following screen will appear.

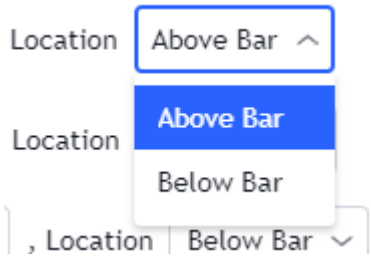


At the top left is a rectangle that shows you the result of your colour selection. The next section is the colour code. This code is given in Hex (sometimes called HTML colour code). This code can be used to convert between other colour formats such as RGB, RGBA, HSL, HSLA and others. You can also obtain a colour in another format and using the web, convert it to hex. Then this code can be entered. These codes are 6 digits long and range from #000000 (black) to #FFFFFF (white). The "Add" button will concatenate the defined colour to the list of coloured rectangles on the previous screen. The new one will be just to the left of the plus sign. The slider located on the right-hand side of the screen can be used to quickly find the colour you want. You should try and find a colour as close to the one you want. The big rectangle to the left of the slider is called the mixer. Using your mouse, you can move the white circle to find the perfect colour. As you move around you will see the colour rectangle at the top left change to match. The colour code will also update with a new code as you move the white circle. Once you are satisfied with your choice, click the "Add" button to add the new custom colour and return to the previous screen. Make sure the Opacity is set to 100% when using a custom colour otherwise you will not see the colour you just created.

Default: Venetian Red

Location: This option is used to change the location of the symbol. It can either be above the bar or below it.

Default is: Above Bar



First Moon Symbol Colour: This option is used to change the colour of the First Moon Symbol. For information on using the colour wheel see above or click here.

Default: Venetian Red

Location: This option is used to change the location of the symbol. It can either be above the bar or below it. For information on location options see above or click here.
Default is: Above Bar

Waning Moon Symbol Colour: This option is used to change the colour of the Waning Moon Symbol. For information on using the colour wheel see above or click here.

Default: Aquamarine

Location: This option is used to change the location of the symbol. It can either be above the bar or below it. For information on location options see above or click here.

Default is: Below Bar

Full Moon Symbol Colour: This option is used to change the colour of the Full Moon Symbol. For information on using the colour wheel see above or click here.

Default: Aquamarine

Location: This option is used to change the location of the symbol. It can either be above the bar or below it. For information on location options see above or click here.

Default is: Below Bar

1/8 Moon Symbol Colour: This option is used to change the colour of the 1/8 Moon Symbol. For information on using the colour wheel see above or click here.

Default: Ripe Mango

Location: This option is used to change the location of the symbol. It can either be above the bar or below it. For information on location options see above or click here.

Default is: Above Bar

3/8 Moon Symbol Colour: This option is used to change the colour of the 3/8 Moon Symbol. For information on using the colour wheel see above or click here.

Default: Ripe Mango

Location: This option is used to change the location of the symbol. It can either be above the bar or below it. For information on location options see above or click here.

Default is: Below Bar

Default: Ripe Mango

Location: This option is used to change the location of the symbol. It can either be above the bar or below it. For information on location options see above or click here.

Default is: Above Bar

7/8 Moon Symbol Colour: This option is used to change the colour of the 7/8 Moon Symbol. For information on using the colour wheel see above or click here.

Default: Ripe Mango

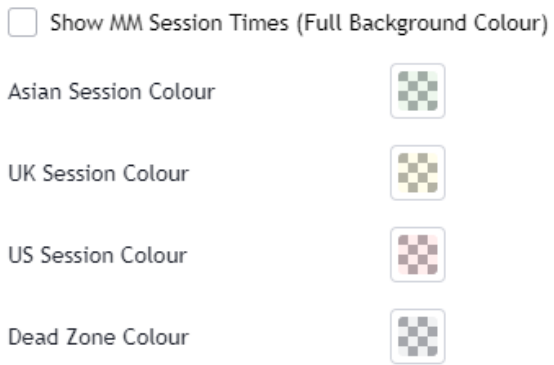
Location:_ This option is used to change the location of the symbol. It can either be above the bar or below it. For information on location options see above or click here.

Default is: Below Bar

PS. If you use a time zone other than your local one you will manually have to convert these times to the selected time zone, otherwise the indicator signals will always be incorrect.

** The math to calculate moon cycles are very complicated. This indicator will only give you an estimate of the time, it will never be precise to the minute or even hour. The exact local time depends on several factors, including time zone, season, shape of horizon, atmospheric refraction, among other things. **

Market Maker Session Times (Full Background Colour)



Show MM Session Time (Full Background Colour):_ When this item is ticked it will show the full background session times on your chart. This option will colour the background of your chart for each time-period one of three "sessions" are active. This option will also colour the "Dead Zone". These sessions are: Asia, UK and US. When unticked it will remove the session times from the chart.

Default: Unticked

Please note: It is possible to have both the session time indicators on at the same time.

Asian Session Colour:_ This option is used to change the colour of the Asian session background. For information on using the colour wheel see above or click here.

Default: Green, Opacity: 10%

UK Session Colour:_ This option is used to change the colour of the UK session background. For information on using the colour wheel see above or click here.

Default: Yellow, Opacity: 10%

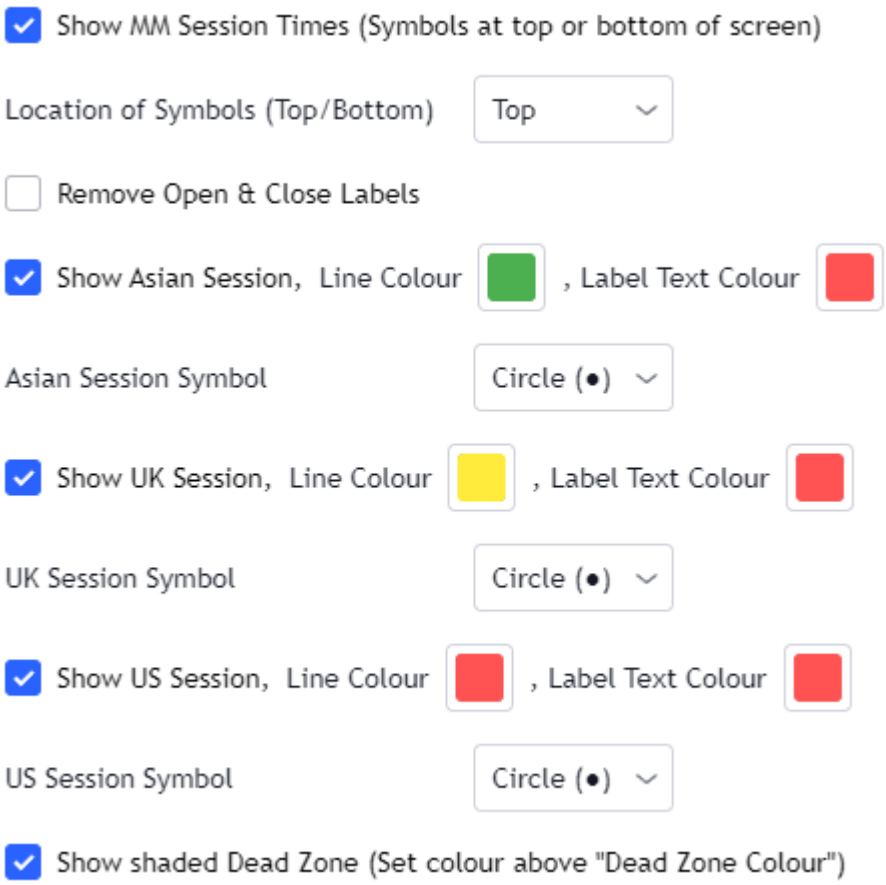
US Session Colour:_ This option is used to change the colour of the US session background. For information on using the colour wheel see above or click here.

Default: Red, Opacity: 10%

Dead Zone Colour:_ This option is used to change the colour of the "Dead Zone" background. For information on using the colour wheel see above or click here.

Default: Grey, Opacity: 10%

Market Maker Session Times (Symbols at top or bottom of screen)

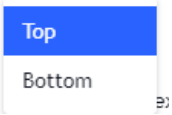


Show MM Session Times (Symbols at top or bottom of screen):_ When this item is ticked it will show the session times at the top or bottom of the screen denoted by your selected symbol. This option will add the selected symbols to your chart for each time-period one of three "sessions" are active. These sessions are: Asia, UK and US. When unticked it will remove the session times from the chart.

Default: Ticked

Please note: It is possible to have both the session time indicators on at the same time.

Location of Symbols (Top/Bottom):_ This option is used to change the position of the symbols. They can be on top or at the bottom of the chart.



Default: Top

Remove Open & Close Labels:_ This option is used to remove the labels (wording) demoting the open/close of each session. If you wish to use the symbols but the labels make your chart, feel to cluttered, this is the option for you.

Default: Unticked

Show Asian Session:_ When this item is ticked it will show the Asian session times at the top or bottom of the screen demoted by your selected symbol on the chart. When unticked it will remove the Asian session from the chart while keeping other selected session time items.

Default: Ticked

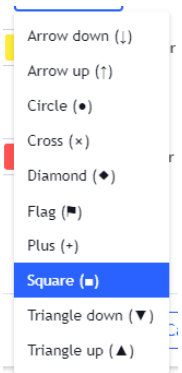
Line Colour:_ This option is used to change the colour of the symbols that represent the Asian session on the chart. For information on using the colour wheel see above or click here.

Default: Green

Label Text Colour:_ This option is used to change the colour of the labels that will print "Asia Open" and "Asia Close" on the chart. For information on using the colour wheel see above or click here.

Default: Red

Asian Session Symbol:_ The user has a selection of 10 symbols to choose from. Clicking on the dropdown will show the items. Any of these can be selected. Once done this symbol will denote the Asian session on the chart. Your option are: Arrow down (↓), Arrow up (↑), Circle (●), Cross (×), Diamond (◆), Flag (⚑) , Plus (+), Square (■), Triangle down (▼) and Triangle up (▲) as illustrated below.



Default: Circle

Show UK Session: When this item is ticked it will show the UK session times at the top or bottom of the screen demoted by your selected symbol on the chart. When unticked it will remove the UK session from the chart while keeping any other selected session time items.

Default: Ticked

Line Colour: This option is used to change the colour of the symbols that represent the UK session on the chart. For information on using the colour wheel see above or click here.

Default: Yellow

Label Text Colour: This option is used to change the colour of the labels that will print "UK Open" and "UK Close" on the chart. For information on using the colour wheel see above or click here.

Default: Red

UK Session Symbol: The user has a selection of 10 symbols to choose from. Clicking on the dropdown will show the items. Any of these can be selected. Once done this symbol will denote the Asian session on the chart. To see a list of the symbols, look above or click here.

Default: Circle

Show US Session: When this item is ticked it will show the US session times at the top or bottom of the screen demoted by your selected symbol on the chart. When unticked it will remove the US session from the chart while keeping any other selected session time items.

Default: Ticked

Line Colour: This option is used to change the colour of the symbols that represent the US session on the chart. For information on using the colour wheel see above or click here.

Default: Red

Label Text Colour: This option is used to change the colour of the labels that will print "US Open" and "US Close" on the chart. For information on using the colour wheel see above or click here.

Default: Red

US Session Symbol: The user has a selection of 10 symbols to choose from. Clicking on the dropdown will show the items. Any of these can be selected. Once done this symbol will denote the US session on the chart. To see a list of the symbols, look above or click here.

Default: Circle

Show shaded Dead Zone (Set colour above "Dead Zone Colour"): When this item is ticked it will show the shaded dead zone on your chart. If it is unticked, it will not. There is no symbol for dead zone, so this is a handy way to see where it is if you don't want to use the coloured background session times.

Default: Ticked

Please Note: It is possible to turn the shaded Dead Zone selection on and have both the session time indicators off. This is not a bug but a feature.

Trading Days

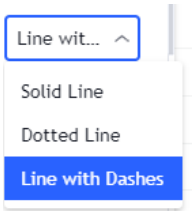
Show Trading Day lines: When this item is ticked it will show a vertical dotted line from the top to bottom of the chart. This line will appear at 17:00 (NY Time) on weekdays.

Default: Ticked

Line Colour: This option is used to change the colour of the line that will appear from the top of the chart to the bottom. This line will be draw at 17:00 (NY Time) to denote the end & start of the trading day. For information on using the colour wheel see above or click here.

Default: Grey

Line Style: This option will set the line style for your vertical day line. Your options are: Solid line, Dotted line, and Line with dashed.



Default: Line with Dashes
